

What's New in ToolBook 11.5

As a busy professional, you require a fast and easy solution for creating learning content. ToolBook, the SumTotal solution for creating interactive content, quizzes, assessments, and software simulations, has now been enhanced for even greater ease in creating rich, interactive, and mobile content quickly.

NEW FEATURES FOUND IN TOOLBOOK 11.5 INCLUDE:

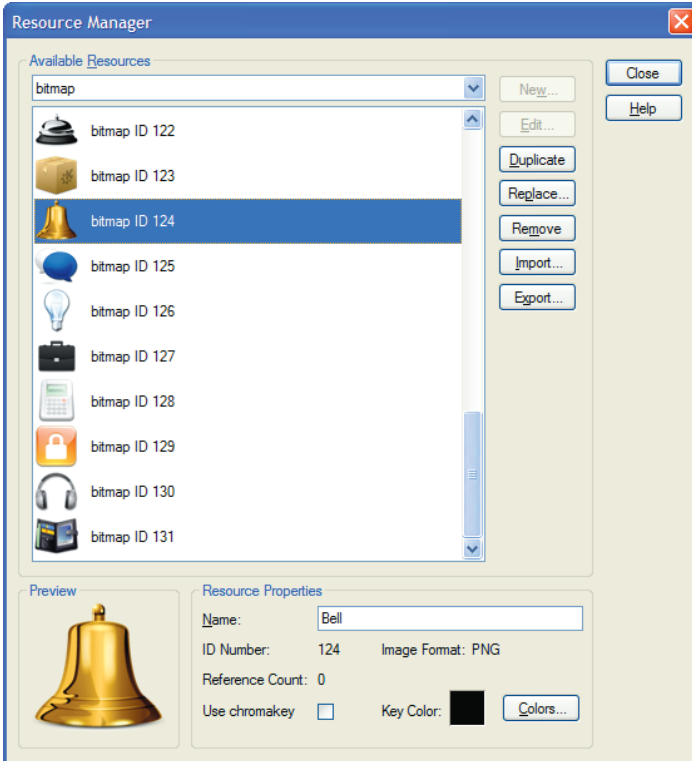

Publish To Web

The Publish to Web Specialist has been redesigned. With the redesign it is now a simple interface that allows you to publish your lesson to web format with virtually a single mouse click. All of the various publishing options are still available if you need to change them, and are accessible using the new Options button.

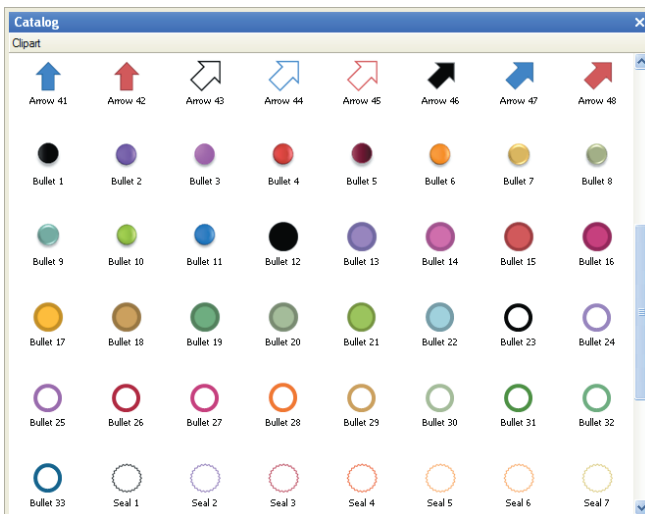

Resource Manager

The size of the Resource Manager has been significantly enlarged, allowing better viewing of the resource list and resource names. In addition a preview feature has been added which will display the selected bitmap resource at a larger size.

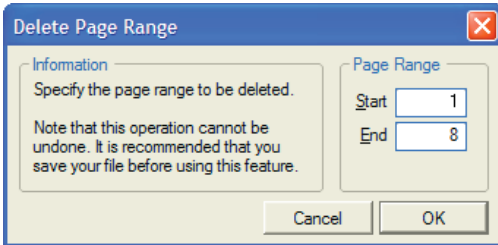

Clipart Catalog Category

The Clipart catalog category has been enhanced to include not only various Bullets and Seals as well as the Arrows you are already accustomed to.

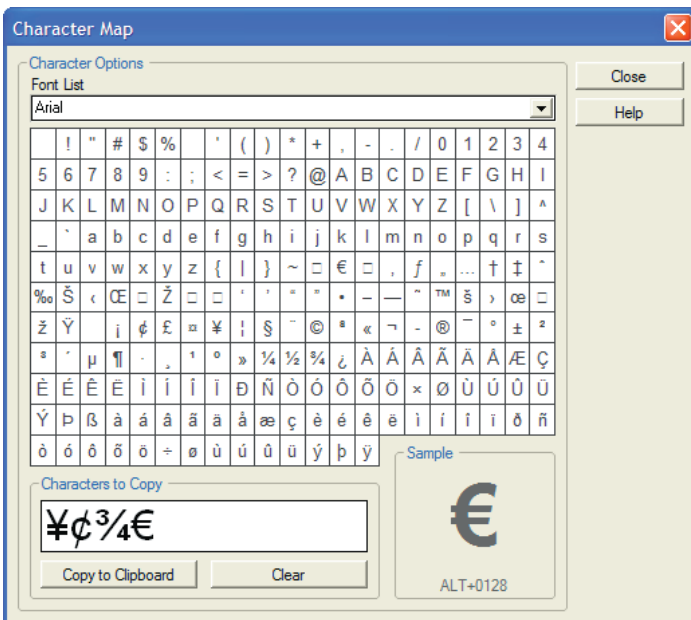

Delete Pages

Deleting a range of pages is now possible using the Delete Pages option in the Tools menu. This will allow you to delete a range of pages in a matter of a few seconds instead of manually deleting them one by one.

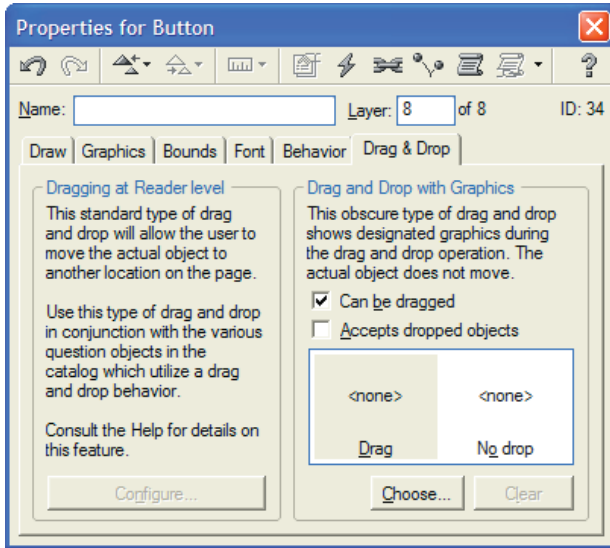

Character Map

Having difficulty figuring out how to add non-standard keyboard characters into your ToolBook fields, such as the Copyright symbol? The Character Map will allow you to easily access and add special characters to your fields.

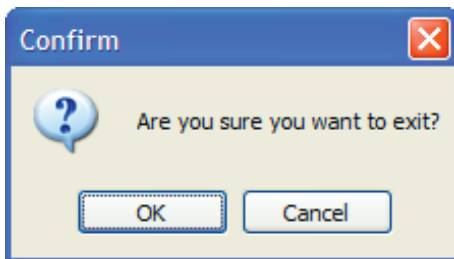

Drag & Drop

The Drag & Drop tab of the Property Editor has been revised to be clearer about which settings to use. The various Help Topics involving Drag & Drop have been updated as well, to clearly differentiate between the two types of Drag & Drop that ToolBook offers.

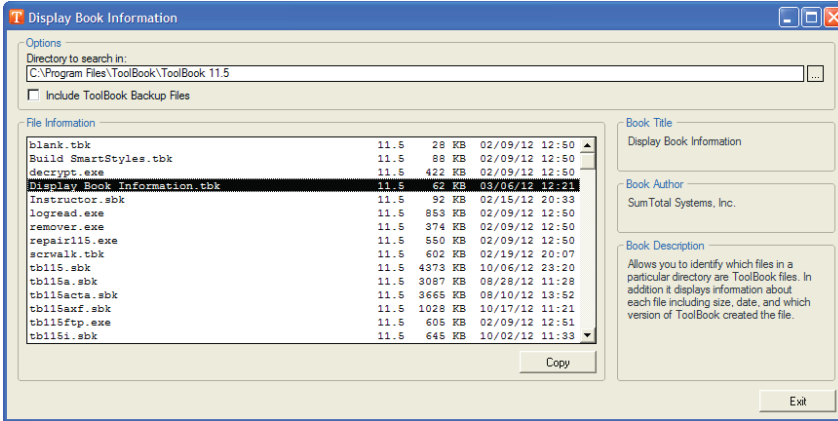

Scoring and Tracking

There are three LMS compatible Exit buttons in the Scoring and Tracking category of the catalog. Each of these have been enhanced to prompt the user with "Are you sure you want to exit?"

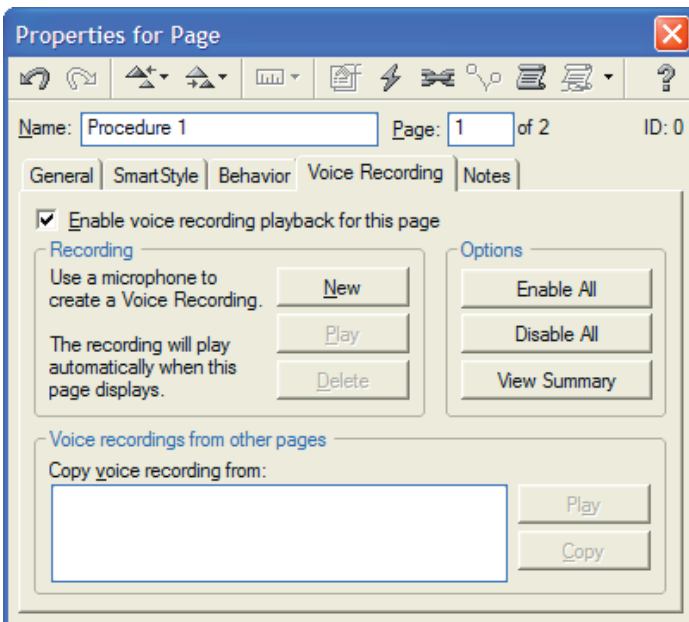

Display Book Information

The Display Book Information utility will provide you with Book Information details about an entire folder full of ToolBook files. It will allow you to quickly see important information about each file in a folder, such as which version of ToolBook last saved each file. This is a very useful utility in determining which ToolBook files are in need of being Version Updated.

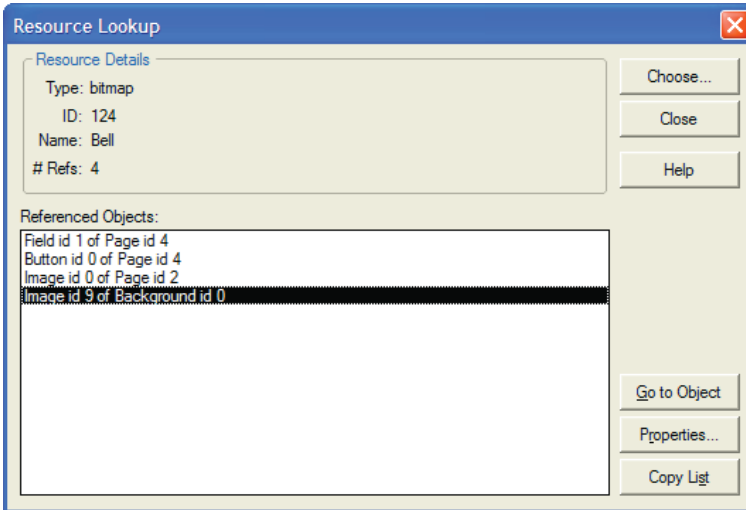

Voice Recording

Several enhancements to the Voice Recording feature have been made. A View Summary button will allow you to see a report of all voice recordings in the current book. Also added is the ability to enable or disable all of the voice recordings with a single click.

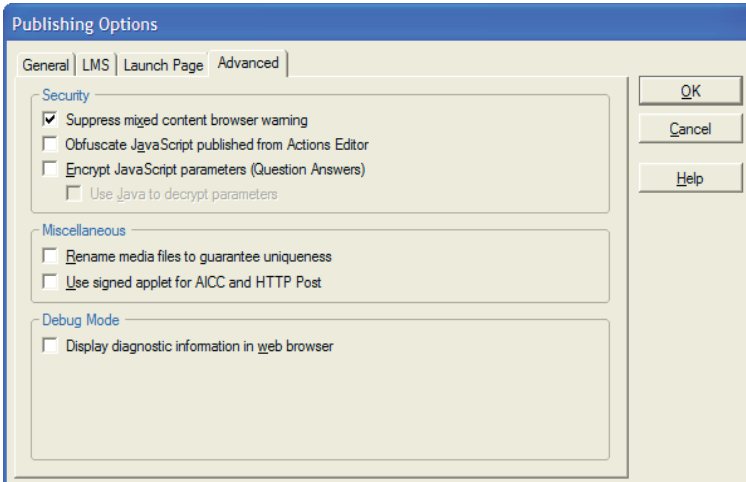

Resource Lookup

Using the new Resource Lookup utility within ToolBook will allow you to quickly find all uses of a particular Resource within your project.

Mixed Content Warning

A new checkbox has been added to the Publish to Web dialog, labeled as Suppress Mixed Content Browser Warning. If you are using a Secure Server (HTTPS), enabling this setting will block the Mixed Content warning that the browser normally would show to the user.

Copy/Paste

If a text field contains a Bitmap Resource in addition to text, and you attempt to copy/paste the field contents into another product such as Microsoft Word, the Bitmap Resources will now be included along with the pasted text.

Firefox 2 and Internet Explorer 6 Support

With this release of ToolBook, support for Firefox 2 and Internet Explorer 6 has been discontinued. ToolBook continues to offer support for Firefox 3+ and Internet Explorer 7+.

Right Click Menus Changes

The following enhancements have been added to the Right-Click menus:

- The option to change the Caption of a button
- The option to set the graphic of an Image object
- The ability to Restore the Aspect Ratio of an Image object

Enhanced Publish To Web Error Logging

The Publish to Web error logging feature will now generate a more detailed explanation of each error encountered. In addition, the enhancements are able to detect (and log) a wider variety of error conditions.
